The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

Cardelli is dropped.

Foreign references are not understood by examiner, but JP patent office found them relevant-please translate.

Claims 1, 3, 5-7 are rejected under 35 U.S.C. 103(a) as being unpatentable over Fukuvi-JP 9-169916 in view of Mawatari et al 5614568).

As shown in the JP PCT translation, Fukuvi provides pesticidal resins, polyamide, with carboxylates-esters, pesticide and fibrous inorganic filler. As to the fibrous filler, Mawatari shows size of fibers to utilize with polymers of Fukuvi types, to provided pesticidal resins (see col.14, lines 14-24, and summary of Mawatari.

Fukuvi disclose the instant active agent & polymers in various formulation, However, not all ingredients and quantification is spelled out. It would be obvious for one in the art to provide appropriate size, and adjuvants, to provide economical, non infective products, given the teachings of Mawatari in the same art as Fukuvi.

All the critical elements of the instant are disclosed. The amounts and proportions of each ingredient are result effective parameters chosen to obtain the desired effects. It would be obvious to vary the form of each ingredient to optimize the effect desired, depending upon the particular article of interest, reduction of toxicity, cost minimization, enhanced, and prolonged, or synergistic effects.

Applicant has not provided any objective evidence of criticality, nonobvious or unexpected results that the administration of the particular ingredients' or

concentrations provides any greater or different level of prior art expectation as claimed, and the use of ingredient for the functionality for which they are known to be used is not basis for patentability.

The instant invention provides well known old art recognized compounds, with well known art recognized effects, applied by well known art recognized methods to achieve ~~saxe~~ products.

Claims 1, 3, 5-7 are rejected under 35 U.S.C. 102(b) as being anticipated by Mawatari et al 5614568.

Claim 1 is too A) polyamide

B) carboxylic acidamic

C) pesticide

D) fibrous inorganic

Mawatari has polyamide (E, col.1) and antibacterial agent (B, col.1) with, carboxylic acid amide (col.9, lines 50-59). Fibrous inorganics are potassium titanate, glass and carbon at 5-150 parts/100 parts composition (col.14, lines 14-24) of 6-60 micron diameter and > 30 micron length.
